Summary

AI Engineer specializing in voice AI agents, LLM applications, RAG systems, prompt engineering, agent orchestration, document ingestion, and production cloud microservices. Experienced building AI products with LiveKit, Telnyx, OpenAI-style LLM workflows, Azure AI Search, Azure Document Intelligence, Node.js, TypeScript, Python, Redis, Docker, and Azure.

Experience

FluxxForward - IT Consulting (via WeeTravel)

Aug 2024 – Present

Lead Software Engineer

Remote - Vancouver, Canada

- Designed and deployed OneSpec, a production AI voice agent for home-service businesses handling 200+ daily inbound calls to qualify leads, answer customer questions, and book appointments autonomously.
- Built a low-latency speech-to-speech LLM pipeline using LiveKit, Telnyx, speech-to-text, LLM inference, and text-to-speech, achieving sub-300ms voice response latency.
- Implemented agent orchestration for call flows, lead qualification, appointment scheduling, fallback handling, and conversation state management.
- Self-hosted LiveKit agent servers using Docker and virtual machines, integrating telephony, webhooks, background jobs, and scalable workers.
- Built asynchronous processing infrastructure with BullMQ, Redis, serverless functions, and horizontally scalable workers for call events, transcripts, retries, and post-call automation.
- Built and shipped Nemo Cares, a voice-first AI caregiving platform delivering medication reminders through automated real-time phone calls with a 96% successful call delivery rate across 50+ active care recipients.
- Designed a sub-500ms real-time voice AI pipeline using LiveKit, Telnyx, speech-to-text, LLM inference, and text-to-speech for outbound reminders and inbound natural-language conversations.
- Developed conversation workflows for reminder confirmation, voicemail detection, transcript analysis, patient responses, and caregiver follow-ups.
- Orchestrated distributed services on Azure Functions, Event Grid, virtual machines, Redis, and Docker, processing 1,000+ scheduled calls per month.
- Built and deployed RAG-powered AI chatbots for municipal governments and enterprise clients using Azure AI Search, Azure Document Intelligence, embeddings, and LLM-based response generation.
- Designed document ingestion pipelines for PDFs and enterprise documents, including extraction, chunking, metadata enrichment, indexing, and semantic retrieval.
- Delivered AI assistants as embeddable WordPress plugins, reducing client support ticket volume by approximately 35%.
- Improved answer quality through prompt engineering, retrieval tuning, source-grounded responses, and domain-specific knowledge base design.
- Built a unified observability dashboard across containerized AI microservices using Prometheus, Grafana, and Loki for API metrics, worker health, queue latency, logs, error rates, and production debugging.
- Rebuilt the WeeTravel customer rental platform with Next.js server-side rendering and SEO optimization, achieving 90+ Lighthouse scores and 100 SEO.

Tak Decor

Oct 2023 – May 2024

Software Engineer

Remote - Gujarat, India

- Built a production e-commerce platform with cart, wishlist, coupons, OTP authentication, and Razorpay payments, serving 5,000+ monthly visitors.
- Improved page-load performance by 75% using Next.js Static Site Generation, frontend optimization, and performance-focused rendering patterns.

Projects

QuizWiz | Full-Stack Software Developer

Live | Code

- Developed a high-performance quiz application using AI-generated questions on user-selected topics, improving user engagement by 35%.
- Integrated OpenAI language models and prompt engineering workflows, achieving a Lighthouse performance score of 98.

Technical Skills

AI and LLM Engineering: LLM applications, RAG, AI agents, prompt engineering, tool calling, embeddings, semantic search, document ingestion, transcript analysis, conversation workflows

Voice AI: LiveKit, Telnyx, speech-to-text, text-to-speech, real-time voice pipelines, telephony automation, call orchestration

Backend and Infrastructure: Node.js, TypeScript, Python, Express, REST APIs, BullMQ, Redis, Docker, Azure Functions, Event Grid, virtual machines, WebSockets, microservices

Retrieval and Data: Azure AI Search, Azure Document Intelligence, PostgreSQL, MongoDB, MySQL, Prisma, Supabase

Frontend: React, Next.js, Tailwind CSS, Shadcn UI, TanStack Query, Zustand, Redux

DevOps and Observability: Amazon Web Services (AWS), Microsoft Azure, Google Cloud, Git, Postman, Prometheus, Grafana, Loki, Kubernetes

Education

Techno India University

Bachelor of Technology in Computer Science and Engineering

2022 – 2026

Undergraduate
