Summary

Forward Deployed Engineer with experience taking AI and full-stack products from customer discovery to production deployment. Skilled in enterprise AI implementation, RAG systems, voice agents, Power Platform automation, customer-facing integrations, cloud microservices, observability, and rapid iteration with business stakeholders.

Experience

FluxxForward - IT Consulting (via WeeTravel)

Aug 2024 – Present

Founding Engineer

Remote - Vancouver, Canada

- Designed an AI phone answering service for home service businesses handling 200+ daily calls, autonomously qualifying leads, answering customer questions, and booking appointments around the clock.
- Self-hosted LiveKit agent servers via Docker and virtual machines with Telnyx telephony integration, delivering reliable low-latency voice responses under 300ms.
- Orchestrated microservices for asynchronous jobs using BullMQ queues, Redis, horizontally scalable workers, and serverless functions.
- Shipped OneSpec initially as a full-featured project management SaaS with real-time collaborative documents, kanban boards, RAG search, RBAC, and Stripe billing before pivoting to AI voice automation.
- Engineered an automated browser agent for QA testing Power Apps model-driven applications, reducing manual testing effort by approximately 70%.
- Designed and shipped Nemo Cares, a voice-first caregiving platform delivering medication reminders through real-time phone calls with a 96% successful call delivery rate across 50+ active care recipients.
- Implemented a sub-500ms speech-to-text, LLM inference, and text-to-speech voice pipeline using LiveKit and Telnyx for outbound reminder calls and inbound natural-language conversations.
- Orchestrated distributed services on Azure Functions, Event Grid, virtual machines, Redis, and Docker, handling 1,000+ scheduled calls monthly for reminders, transcript analysis, and voicemail detection.
- Spearheaded go-to-market validation, generating 500,000+ Reddit impressions within 16 hours.
- Rebuilt the WeeTravel customer-facing rental platform with Next.js server-side rendering and SEO optimization, achieving 90+ Lighthouse scores and 100 SEO.
- Built a custom CRM and ticketing system that consolidated 3+ third-party tools, saving approximately 20 hours per week and reducing annual support tooling costs by \$4,800.
- Built and deployed RAG-powered AI chatbots for municipal governments and enterprise clients using Azure AI Search, Azure Document Intelligence, embeddings, and LLM-based response generation.
- Designed document ingestion pipelines for PDFs and enterprise documents, including extraction, chunking, metadata enrichment, indexing, and semantic retrieval.
- Delivered AI assistants as embeddable WordPress plugins, reducing client support ticket volume by approximately 35%.
- Developed Power Platform internal tools with model-driven Power Apps, Microsoft Dataverse, custom JavaScript extensions, business rules, data validation, and automated workflows for a leading Canadian pension corporation.
- Built a unified observability dashboard across containerized microservices using Prometheus, Grafana, and Loki for API metrics, worker health, queue latency, service logs, error rates, and production debugging.

Tak Decor

Oct 2023 – May 2024

Software Engineer

Remote - Gujarat, India

- Built a production e-commerce platform with cart, wishlist, coupons, OTP authentication, and Razorpay payments, serving 5,000+ monthly visitors.
- Improved page-load performance by 75% using Next.js Static Site Generation, frontend optimization, and performance-focused rendering patterns.

Projects

QuizWiz | Full-Stack Software Developer

Live | Code

- Developed a high-performance quiz application using AI-generated questions on user-selected topics, improving user engagement by 35%.
- Integrated OpenAI language models and prompt engineering workflows, achieving a Lighthouse performance score of 98.

Technical Skills

AI and LLM Engineering: LLM applications, RAG, AI agents, prompt engineering, tool calling, embeddings, semantic search, document ingestion, transcript analysis, conversation workflows

Voice AI: LiveKit, Telnyx, speech-to-text, text-to-speech, real-time voice pipelines, telephony automation, call orchestration

Backend and Infrastructure: Node.js, TypeScript, Python, Express, REST APIs, BullMQ, Redis, Docker, Azure Functions, Event Grid, virtual machines, WebSockets, microservices

Enterprise and Customer Delivery: Power Apps, Microsoft Dataverse, workflow automation, JavaScript extensions, CRM systems, ticketing systems, client implementation, stakeholder discovery

Retrieval and Data: Azure AI Search, Azure Document Intelligence, PostgreSQL, MongoDB, MySQL, Prisma, Supabase

Frontend: React, Next.js, Tailwind CSS, Shadcn UI, TanStack Query, Zustand, Redux

DevOps and Observability: Amazon Web Services (AWS), Microsoft Azure, Google Cloud, Git, Postman, Prometheus, Grafana, Loki, Kubernetes

Education

Techno India University

Bachelor of Technology in Computer Science and Engineering

2022 – 2026

Undergraduate
